WEBSITE SEO & TECHNICAL AUDIT

Satyajan Energy Solutions Pvt. Ltd.

Target page: https://satyajan.com/products
Audit date: 28 October 2026
Prepared for: Candidate Technical Assessment

Audit scope	Technical accessibility, indexation signals, on-page SEO, performance, links/redirects, structured data and prioritized recommendations.
Evidence standard	Live public page inspection plus targeted web checks. Items that could not be conclusively measured are labelled **Needs verification**, not asserted as failures.
Overall status	The products page is publicly retrievable and exposes meaningful page content and navigation. Several important technical checks require direct tool runs or Search Console access before final sign-off.

Executive summary

A public crawl of the target URL returned the Products page with navigation, product-category links, contact details, and descriptive introductory copy. The page's extracted document title appears to be "Buy Microtek Inverter, Battery & Solar in Hyderabad | Satyajan Energy Solutions | Satyajan Energy Solutions," which repeats the brand phrase at the end and should be reviewed for duplication and length. The visible content includes a primary "Products" heading and a descriptive subheading, which is a useful starting structure.

The audit could not reliably retrieve the site's robots.txt or sitemap.xml endpoints, and the public PageSpeed report did not return a usable score in this audit session. Therefore, robots directives, sitemap validity, field Core Web Vitals, SSL certificate details, redirect chains, broken-link totals and schema validity are not marked as confirmed failures. They are listed as priority verification items with exact free tools and next steps.

Key priority

- **P1 — Verify crawl/indexing controls:** check robots.txt, XML sitemap, canonical and robots meta directives; then confirm the URL in Google Search Console.
- **P1 — Run performance tests:** obtain mobile and desktop PageSpeed Insights results and address the largest reported opportunities.
- **P2 — Improve metadata:** shorten and de-duplicate the title; verify a unique, useful meta description and one clear H1 in rendered HTML.
- **P2 — Validate ecommerce signals:** test Product, Offer, Organization and BreadcrumbList structured data where applicable.

1. Scope and methodology

Target URL: https://satyajan.com/products. The assignment asks for a technical health and indexing review, on-page SEO, performance, links/status codes, structured data and a practical action plan.

Evidence gathered

- Opened the public products page and reviewed its extracted text, headings, navigation, category links, contact details and document-title text.
- Attempted to open https://satyajan.com/robots.txt and https://satyajan.com/sitemap.xml; these endpoints did not return readable content in the audit browser. This is inconclusive: the access failure may be a tool limitation and does not prove the files are missing.
- Attempted to access a PageSpeed Insights result page; no usable score/metric report was returned in this session.

Limitations

This is a public-surface assessment, not a crawl of the entire site. No Google Search Console or analytics access was available. Performance lab scores, CrUX field data, HTTP response headers, TLS certificate chain, link crawl totals and schema test output need to be captured directly in the named tools before being treated as measured results.

2. Findings

Area	Observed status	Finding / interpretation	Priority
Public page access	Observed	The target page is publicly retrievable and contains product-focused text and site navigation. This is a positive baseline signal, but not proof that Google has indexed it.	Info
Title tag	Review recommended	Extracted title: “Buy Microtek Inverter, Battery & Solar in Hyderabad | Satyajan Energy Solutions | Satyajan Energy Solutions”. Brand phrase is repeated and the title is likely longer than needed. Confirm exact HTML title and pixel width in a crawler.	P2
Heading structure	Partial observation	Extracted page text shows “Products” followed by “Discover Our Products.” Verify the actual rendered HTML contains one descriptive H1 and logical H2/H3 structure.	P2
Content relevance	Opportunity	Introductory copy says the page covers 101+ Microtek inverters, batteries, solar panels and UPS. Add concise category descriptions and useful selection details if absent from rendered page.	P2
Robots.txt	Needs verification	Endpoint could not be inspected through this audit browser. Confirm it returns HTTP 200, has valid syntax and does not disallow /products or essential CSS/JS resources.	P1
XML sitemap	Needs verification	Sitemap endpoint could not be inspected. Find the actual sitemap in robots.txt or CMS; confirm it is valid XML and includes canonical, indexable product/category URLs.	P1
Canonical / noindex	Needs verification	Inspect HTML source and response headers for one absolute canonical pointing to the preferred products URL and ensure no accidental noindex directive exists.	P1
HTTPS / SSL	Partial observation	The target is served via an HTTPS URL. This alone does not validate certificate trust, expiry, mixed content or HTTP-to-HTTPS redirects.	P1 verify
Speed / Core Web Vitals	Not measured	No reliable mobile/desktop PageSpeed score or LCP, INP, CLS values were obtained. Run the official test for both device types and record the result date.	P1
Images / alt text	Needs verification	The extracted page identifies a Satyajan logo image, but does not provide enough evidence to judge alt-text quality for all product images. Check decorative images use empty alt and informative product images use descriptive alt.	P2

Area	Observed status	Finding / interpretation	Priority
Links / status codes	Needs verification	Page extraction shows navigation and multiple product/service links. A full crawl is required to count broken internal/external links and detect redirect chains; no broken-link count is claimed.	P2
Structured data	Needs verification	No valid schema output was captured. Test for Organization, BreadcrumbList and relevant Product/Offer markup on individual product detail pages. Do not add Product schema to a category page unless the page genuinely represents a product.	P2

3. Prioritized action plan

Priority	Action	How to verify / acceptance criteria
P1 — Immediate	Confirm robots.txt and sitemap	Open /robots.txt; verify HTTP 200, syntax, sitemap declaration and no accidental disallow of important paths. Open declared sitemap; verify valid XML and canonical URLs return 200. Submit sitemap in Search Console.
P1 — Immediate	Check indexability and canonical	Use URL Inspection in Google Search Console for /products. Confirm crawl allowed, indexing allowed, user-declared canonical and Google-selected canonical match the preferred URL. Check HTML for one absolute canonical and no unintended noindex.
P1 — Immediate	Run mobile + desktop performance tests	Use PageSpeed Insights on the target URL and homepage. Save scores, LCP, INP, CLS, TTFB and top opportunities. Prioritize real-user Core Web Vitals; field data may be unavailable for low-traffic URLs.
P1 — Immediate	Validate HTTPS and redirects	Check TLS certificate validity and mixed content; test HTTP, www/non-www and trailing-slash variants. Ensure a single-hop 301/308 to the preferred HTTPS hostname and final page returns 200.
P2 — High	Rewrite page title	Suggested title: “Microtek Inverters, Batteries & Solar Products | Satyajan”. Verify it accurately reflects the page and does not duplicate the same brand phrase. Character counts are guidance; review SERP pixel width.
P2 — High	Add / improve meta description	Suggested draft: “Explore Microtek inverters, home UPS, batteries and solar solutions from Satyajan. Compare product categories and contact our team for help choosing the right power backup.” Adjust to actual stock, service area and offers; keep unique per page.
P2 — High	Improve headings and category copy	Use one H1 such as “Microtek Inverters, Batteries & Solar Products”. Use H2s for major categories and add short original descriptions that help users compare products. Keep heading order logical.
P2 — High	Audit images	For product images, use concise alt text describing the visible item/model where known. Use alt="" for decorative images. Serve appropriately sized WebP/AVIF where supported, include width/height and lazy-load below-the-fold imagery.
P2 — High	Validate structured data	Run Google Rich Results Test and Schema Markup Validator. Use Organization details consistently; add BreadcrumbList where appropriate and Product/Offer on genuine product detail pages only. Fix validation errors and avoid invented ratings/prices.
P2 — High	Crawl links and redirects	Use a free crawler or link checker to crawl the products page and linked category/product pages. Export 4xx links, 5xx URLs, redirect chains and internal links pointing to redirects. Fix internal links at source.
P3 — Ongoing	Monitor after fixes	Re-run the same checks after deployment, compare results, inspect indexed URLs and monitor Search Console Page Indexing, Core Web Vitals and enhancement reports.

4. Free tools and exact test checklist

Use these tools to capture reproducible evidence. Save a screenshot or export for each test and note the date/device.

Check	Tool	Target / what to record
Page-level SEO	SEOptimer / SEOmator / a browser-based SEO checker	https://satyajan.com/products — title, description, H1/H2s, canonical, robots, image alt, response status.
Robots	Browser or HTTP checker	https://satyajan.com/robots.txt — status, rules, sitemap line.
Sitemap	Browser or XML validator	Start from robots.txt or CMS; check valid XML, indexable URLs and lastmod where maintained.
Speed	Google PageSpeed Insights	https://pagespeed.web.dev/ — run /products and homepage separately on mobile and desktop; capture performance and Core Web Vitals.
Indexing	Google Search Console URL Inspection	Inspect /products; record indexed status, last crawl, indexing allowed, rendered page and canonical selection.
Structured data	Google Rich Results Test + Schema Markup Validator	Test the category page and at least one actual product-detail URL; record detected types, errors and warnings.
Links / redirects	Free online link checker or Screaming Frog SEO Spider free tier	Crawl scope and page limit; export 4xx/5xx, redirect chains and internal links to redirected URLs.
TLS / HTTPS	Browser security details / SSL Labs	Certificate expiry/trust, mixed content and HTTP-to-HTTPS redirect behavior.

5. Recommended metadata draft

Proposed title: Microtek Inverters, Batteries & Solar Products | Satyajan

Proposed meta description: Explore Microtek inverters, home UPS, batteries and solar solutions from Satyajan. Compare product categories and contact our team for help choosing the right power backup.

Proposed H1: Microtek Inverters, Batteries & Solar Products

These are editorial recommendations, not verified current tag values. Confirm product claims, availability and target geography with the business before publishing. Metadata length guidance is approximate; search engines can rewrite snippets.

6. Final conclusion

The page is publicly accessible to this audit browser and presents relevant product-category content. The most visible improvement opportunity is to review the duplicated/long title text and strengthen category-specific content. Before claiming the site is technically healthy, the team should verify robots.txt, sitemap, canonical/indexing directives, mobile/desktop performance, HTTPS behavior, links and structured data using the tools above. Those measurements are currently unconfirmed rather than failed.
